

PROJECT DOCUMENTATION

AI Automation Framework using Flask, Playwright, and LangGraph

Objective:

Set up Python environment, install dependencies, create Flask server, automate UI using Playwright, and build baseline LangGraph agent.

Technologies Used:

Python 3.11, Flask, Playwright, PyTest, LangGraph, HTML/CSS/JS

Steps:

1. Create virtual environment and install dependencies.
2. Install Playwright browsers.
3. Setup project structure.
4. Create Flask server to host login.html.
5. Implement Playwright Page Object Model.
6. Write automated test case.
7. Configure baseline LangGraph agent.
8. Run tests using pytest.

Outcome:

Automation framework ready with browser testing and agent integration foundation.
